

Auburn Bearing & Manufacturing T-200RG

BALL THRUST BEARING ENCLOSED STYLE SELF CONTAINED ROUND GROOVES

Auburn Enclosed Style T-200RG Ball Thrust Bearing is recommended for use where maximum carrying capacity is desired but thickness space is limited. It is self-contained, the two races and balls being held together as a unit by the outside sleeve.

MOUNTING INSTRUCTIONS:

Enclosed Style T-200RG Ball Thrust Bearing is generally installed so that the race having bore "A" is centered by the shaft and rotates with it. The race with the sleeve attached to it and having clearance bore "A'" seats against a fixed part of the machine and is stationary. If installed in a recess, a clearance of one-eighth inch, or more, should be left around diameter "B" so that if the shaft should wear in its journal bearings, the thrust bearings will be free to follow without cramping or wedging the balls.
