

Auburn Bearing & MANUFACTURING

Made in the USA since 1898

What Is “Unobtainable” ?

We find ourselves asking the question “**Is it unobtainable?**” quite a bit here at Auburn Bearing & Manufacturing. You may be wondering what we mean when we ask this. The Merriam-Webster Dictionary defines **unobtainable** as “not capable of being obtained,” but to us, it encompasses so much more. So, what exactly does “**unobtainable**” mean at Auburn Bearing & Manufacturing?

There are a number of situations where we might consider your bearing or custom part to be “**unobtainable**”, such as...

- 1) The OEM no longer makes the part.
- 2) The OEM wants an unreasonable minimum order quantity.
- 3) The quoted delivery/lead time is too long.
- 4) The quoted price is through the roof.
- 5) The quality and performance of the available product doesn't meet your requirements.
- 6) The product is made offshore (not DFARS).
- 7) It is a variation of a standard part that meets any of the above.

Auburn Bearing & Manufacturing specializes in the production of thrust, radial, custom, and obsolete bearings in low to medium volume (one piece to thousands) with short 4 to 6 week lead times. We can quote per print, per sample, and per part number from another manufacturer.

With the Auburn Advantage, you'll benefit from *shorter lead times, faster response times, on-time delivery, low minimum order quantities, innovative solutions, personalized service, trusted engineering support, high precision capabilities, and quality products that are made in the USA.*

Our bearing experts are available to offer you quick and knowledgeable recommendations with regards to custom orders and solutions. So, the next time your application or project requires a bearing or component that's “**unobtainable**,” give Auburn Bearing & Manufacturing a call!
